

Exercises 1.1

Learn C With Babbo

1. In the "Hello World" program, what does the line

```
printf("Hello World!\n");
```

do? Try changing it to

```
printf("Hello World!");
```

and compile it and run it again. What's the difference?

2. Remove the line

```
#include <stdio.h>
```

and try to recompile the program. It should fail: why is this so?
